is very important that you input an accurate result; Dosage is the prescribed amount of drug in mg per kg of body weight. You can usually find this number on the medicament box or on the prescription.

Dosage Calculator - How to Calculate Dosage?

An example would be a prescription for ciclosporin of 10mg/kg. To calculate the child's prescription you need to know an accurate weight for the child in kilograms and then multiply this by the dosage specified. For example, if the child's weight was 12kg then the dose required would be $10\text{mg/kg} \times 12\text{kg} = 120\text{mg}$.

How to calculate drug doses and infusion rates accurately ...

Calculating Drug Dosages When performing drug calculations, one of the following four methods should be used: Ratio (Rainbow) Method, Proportion Method, Formula Method, or
