Environmental and occupational health scientists study physical, biological and chemical exposures encountered by the public to provide solutions to natural and man-made problems in our environment. Through interactive field and laboratory work, our students learn to identify and address the potential effects of exposures from activities and ...

## Epidemiology, Human Genetics and Environmental Sciences ...

The word "Epidemiology" means "the study of what is amongst the people", roughly translated from the Greek epi (among or upon), demos (the people) and logos (to study). Although we think of it in terms of human population, there are areas of epidemiology today for zoology, botany and other biosciences where disease affects a population's health or mortality.
